Goals

Develop and deploy an efficient, data-driven AI system that optimizes a multi-modal transit network, specifically designed for the unique challenges of industry hubs in rural areas; and second, we identify equitable fare structures that will make the project sustainable for all stakeholders.

Civic Engagement

We are committed to collaborating extensively with various public and private stakeholders. These partnerships will be crucial for making well-informed decisions that promote community growth, economic development, and a successful transit system.

About Us

Our team is led by Dr. Sabya Mishra from the University of Memphis, Dr. Laszka, Dr. Talusan, and Dr. Guthrie. We have worked extensively on improving fixed-line and on-demand services with different agencies in the U.S. as well as understanding the requirements and preferences of urban and rural commuters with diverse demographics and socio-economic characteristics.

We have partnered with Memphis Area Transit Authority (MATA), Nashville WeGo Public Transit, and Chattanooga Area Regional Transportation Authority (CARTA) in several projects.

Established partnerships between academic experts and public-private stakeholders to enhance the safety of roadside work zones

Have extensive experience leveraging data-driven AI systems to augment the capabilities of domain experts.
